Clinic/Hospital Token System

- Waiting in a queue, standing for your turn is no one's favourite activity. This is worse when you are unwell
- Aims to bridge the gap between tradition token system with a modern approach
- Service industries require an efficient, strategic approach to managing queues.
- It is important to ensure patients can get effective time with doctor.
- Time management depends on availability of doctor for consultation. A proper real-time adjustment can make queue management effective.

Key Features

- Web app for administration
- Android App for Doctors and Patients
- Display and announce tokens on Malayalam and English (Other languages also can be included)
- Essential control of queue management by doctors. (Availability for Consultation, Away for ward rounds etc.).
- Doctor can write prescriptions, view health updates and history of patient
- Organize Queue on priority basis if needed.
- Patient side app to monitor token status and time for consultation
- Patient can also view history of consultations and notifications from admin.
- Generate reports based on date, patient or doctors.

What we Offer

1. Web Application for Admin
 2. Android/ios Application for Doctors
 3. Android/ios Application for Patients
- 

Why choose us?

1. This system is suitable as a service. No expensive hardware required.
2. Easy and customizable feature as per requirement.
3. Low cost of operations.

Admin Screenshots

The screenshot displays the admin interface for the Token System. On the left is a dark blue sidebar with the following menu items: Home, Counter, Video Out, and Reports. The main content area is titled 'Add Token' and contains two forms. The 'New Token' form has fields for Patient Name, Patient Place, Gender (with radio buttons for Male, Female, and Other), Patient Age, and Age Category. The 'Token Search' form has a field for OP Number. Both forms have a 'Submit' button and a 'Cancel' button. The top right of the interface shows the user is logged in as 'Admin'.
